i-spraywash HACCP Australia Certified for Use in Food Establishments

Sydney, NSW: i-team ANZ has received another significant vote of confidence for their foam cleaning system, i-spraywash. After successfully completing the HACCP evaluation program, the i-spraywash gun and cleaning tablets are now certified by HACCP Australia as compliant and suitable for use within the food industry.

HACCP Australia is a leading food science organisation, specialising in the HACCP food safety methodology and its applications within the food and related non-food industries. This certification is highly recognised in the food industry and allows the i-spraywash to be used for cleaning food production plants, kitchens and cooking facilities.

Steve Bagshaw, i-team ANZ Regional Ambassador, says *"We are excited to announce HACCP certification for i-spraywash foam cleaning system to support its introduction to the ANZ market. The HACCP Australia program confirms the suitability of i-spraywash for cleaning in the food industry, building on its most popular application which is washroom cleaning. i-spraywash gained rapid market acceptance in Europe due to the efficiency and effectiveness of the system, and we are seeing the same for ANZ."*

About i-spraywash

The i-spraywash is a revolutionary foaming cleaning system which significantly reduces washroom and kitchen cleaning time. Faster, safer, lighter, and with lower environmental impact than many of its competitors, the i-spraywash foaming gun dispenses highly consistent Active Foam. Active Foam bubbles are lighter, cleaning longer on vertical services, providing optimal results compared to heavy conventional foam bubbles which run quickly to the ground.
